

DECON ZONE

Tactical Equipment Sanitizing System

The DECON-ZONE destroys harmful bacteria on items placed in its cabinet. It provides sanitation of water containers, clothing, blankets, pots & pans, utensils, medical equipment, and search & rescue equipment.

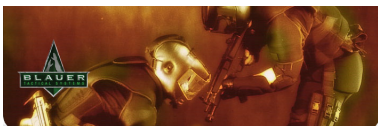

- A patented system that produces OZONE in the confines of a stainless steel cabinet. Ozone is one of the strongest oxidants and disinfectants available, ranking ahead of hydrogen peroxide, bleach, and iodine, without the residue and odor.
- Decon-Zone operates on common 110/120 volts (Solar Power/small generator can be used for remote or powerless locations). Decon-Zone draws only 3.5 amps of electricity.
- No consumables to buy such as disinfectant sprays.
- In the battle against various bacteria, ozone is a proven killer. An independent laboratory tested the Decon-Zone patented system on STAPH, MRSA, and Candida. The results were a greater than 99.9% kill rate on these bacteria.
- This unit does not remove dirt, but eliminates odors associated with bacteria.
- The system maintains an ozone level of well below the guidelines for ozone set by OSHA, NIOSH, ACGIH, and NRC when used as directed.
- Processing time is 12 minutes of Ozone after your equipment is loaded into the machine, plus the ozone reduction cycle.
